TECHNICAL DATA SHEET

Consolidating filler and uniforming base.

FEATURES

Water-based acrylic primer for interiors, structuring and multifunctional. It reduces the absorbency of the surfaces and guarantees good anchoring to subsequent paints. It is characterized by high resistance and good consolidating power. It is also suitable for food environments and public places as it is non-toxic and does not smell bad.

Available in two sizes: 0.750L and 2.5L

WHERE TO USE IT

You can apply it on plasterboard, concrete, rough cast plaster, stucco smoothing, stone and all building materials that have a good degree of absorbency and porosity. It is used as a primer for the application of decorative finishes and as a connecting primer for mineral finishes. It is only suitable as a base coat and not as a finish.

APPLICATION

- Scrape, brush and remove old paints or parts of plaster that are not perfectly adherent.
- Apply to healthy, dry and clean walls.
- In case of molds, humidity, bacterias on the surface, treat it and restore it before applying the product.
- Dilute the product up to a maximum of 10%.
- Apply after mixing carefully in 2 coats with a brush or roller to obtain rustic finishes.
- **On absorbent surface** (Walls, plasterboard or wood), apply Base coat Lime Paint. If the surface is dusty or crumbling, first treat it with Lime Paint Consolidator. Let it dry 2-4 h
- **On no absorbent surface:** First apply one coat of Fleur Universal Primer (Drying time 24h) to guarantee a perfect adhesion and then apply the Lime Paint Base Coat.
